If you have only a short time in our county, try these locations first! **Sauvie Island** is probably the best location in any season and is quite close to Portland. A wide variety of habitats makes for good birding year round. Below are some other choice locations.

Authors/Editors: John Fitchen, John Gatchet, Andy Frank, Adrian Hinkle, Christopher Hinkle, Marcia Marvin, Chuck Gates
County Seat: Portland
County Size: 466 square miles
High Elevation: Buck Peak (4,751 feet)
Rarities: Emperor Goose, Yellow-billed Loon, Masked Booby, Magnificent Frigatebird, Sharp-tailed Sandpiper, Slaty-backed Gull, Northern Hawk-Owl, Costa's Hummingbird, Vermillion Flycatcher, Scissor-tailed Flycatcher, Plumbeous Vireo, Brown Thrasher, Lark Bunting, Summer Tanager, Smith's Longspur, McCown's Longspur, Rustic Bunting, Blue Grosbeak, Painted Bunting, Rusty Blackbird, Brambling
Top County Lister: John Fitchen (296)
Year List Record: Adrian Hinkle 2013 (226)
County Contact Person: Email John Fitchen

Introduction: Multnomah is the smallest county in Oregon. However, the old adage, "Good things come in small packages." can certainly be applied to this county. While accommodating Oregon's largest city and many other intensely populated regions, Multnomah County provides many "pockets" of habitat that attract migrants and residents. Two of Oregon's most important rivers (the Columbia and the Willamette) merge in this county and many birds use these waterways during at least part of the year. Over 350 species have been discovered here and a robust community of birders make regular forays to many of the sites mentioned in this guide. An indispensable resource for birding Multnomah County is John Fitchen's "Birding Portland and Multnomah County". This 70 page book covers the major birding areas of the county in a much more detailed manner than our online guide. The maps alone are worth the list price of $12.95 at the Portland Audubon Nature Store (503-292-6855), Powell's Books in Portland ( ), as well as ABA Sales (1-800-634-7736). Detailed site descriptions, photos, and John Fitchen's personal accounts of birding this county give the reader a front row seat to all the birding action in Multnomah County. The checklist at the end of the booklet has abundance codes that help birders determine the likelihood of finding specific quarry and give a full list of the expected species in the county. Finally, there is a 7-page section that gives detailed advice for finding specific species so you don't have to search all the wrong places before finding what you are looking for. Every Oregon birder should
own this book and it is a must for out of state visitors to the greater Portland area.

View A Google Map

Location, Habitat, and Birds: Located right on the Multnomah County border, this nursery is open to the public. Take Hwy 30 west from I-5 for about 18 miles and turn left (south) on Watson Road. After going through a couple of curves, you will see the signs for the nursery. Bird Watson Road past the nursery too. The surrounding region can be very birdy and the nursery itself attracts quite a few birds. Some species commonly found here include Sharp-shinned Hawk, Band-tailed Pigeon, Vaux's Swift, Rufous Hummingbird, Red-breasted Sapsucker, Pileated Woodpecker, Willow Flycatcher, Pacific-slope Flycatcher, Hutton's Vireo, Warbling Vireo, Steller's Jay, swallows, Black-capped Chickadee, Bewick's Wren, Winter Wren, Golden-crowned Kinglet, Swainson's Thrush, Varied Thrush, Orange-crowned Warbler, Savannah Sparrow, Fox Sparrow, Black-headed Grosbeak, Purple Finch, and Evening Grosbeak.

Click Here for a Checklist of Sauvie Island Birds
Click Here For A Map Of Sturgeon Lake Constructed By Bob Archer.

Location, Habitat and Birds Go to the Oregon Birding Trails Website. Choose the Willamette Valley Birding Trail. Click on the Trail Guide and choose the Columbia Loop Guide. (Check sections C-16 through 18).
Kelly Point Park

**Location, Habitat and Birds:** Located at the confluence of the Willamette and Columbia Rivers, this location can be a promising migrant stop and is good for both water and land birds. Search the trees for migrant or resident passerines and then scope the shore and river for water birds. See the eBird checklist above for a list of birds.

Smith-Bybee Lakes Wildlife Area

**Location, Habitat, and Birds:** Go to the [Oregon Birding Trails Website](https://www.oregonbwwt.com/). Choose the Willamette Valley Birding Trail. Click on the Trail Guide and choose the Portland Loop Guide. Section P-1. Though White-throated Sparrow, Common Goldeneye, and Red-eyed Vireo are mentioned in this guide, these species are rare at this location and should be reported should you come across any of them at Smith-Bybee.

Columbia River Slough Bike Trail

**Location, Habitat, and Birds:** From I-5, take Marine Drive west for about a mile and turn left (south) on N. Portland Road. Go one mile and look for a parking area for the bike path on your left. Take this bike path east and you will soon see the Columbia Sewage Ponds. Check these for ducks and shorebirds. Continue on and you'll see the Heron Lakes Golf Course on your left. This area has a good bunch of ponds that can hold waterfowl. Further on, you can scope the fields of the Portland International Raceway. Loafing...
gulls often collect here and large flocks of geese can produce an unusual sighting occasionally.

**Heron Lakes Golf Course - Force Lake**

**geographic coordinates** 45°36'13.3"N 122°41'43.8"W

(45.603703, -122.695485)

View A Google Map

eBird Hotspot Checklist for Force Lake

**Location, Habitat, and Birds:** Take I-5 exit 307 and travel west on Marine Drive for less than a half mile. Turn left (south) on West Delta Park and it will soon become N. Force Avenue. Explore the lake and other areas around this region. There is a lot of water here and birds are abundant. Check the areas around the golf course and keep an eye on the bare patches for longspurs and sparrows. Some species you might encounter are Greater White-fronted Goose, Cackling Goose, many duck species, 3 grebes, Great Egret, shorebirds, gulls, and a wide variety of passerines.

**Vanport Wetlands**

eBird Hotspot Checklist for Columbia Point/Hayden Island
**Location, Habitat, and Birds:** From I-5 northbound, take exit 308 (Hayden Island/Jantzen Beach). Proceed down the exit ramp and take the first right onto what becomes N. Tomahawk Island Drive. Go 0.1 mile and turn left onto N. Hayden Bay Drive (there is a sign at this turn that reads “River House”). Go 0.3 mile to cul-de-sac at Columbia Point (Condominium Community and Marina). Park and walk left of Columbia Point building on paved path to the riverbank (~50 yards). This island is in the middle of Oregon's largest river so the birding implications are obvious. That said, **this location is most productive in fall and winter**. This is a great spot for grebes (all six species including regular sightings of Red-necked and Clarke's), scoters (all three species) and rarities like Parasitic Jaeger. Waterfowl of all kinds can be found here including late fall loons and scoters but don't neglect to look for passerines in the bushes and trees.

eBird Hotspot Checklist for Marine Drive Broughton Beach  
eBird Hotspot Checklist for Marine Drive (148th NE Pullout)  
**Location, Habitat, and Birds:** From I-5 near the Columbia River, take exit 307 to Marine Drive. Go east on Marine Drive for 4.0 miles and turn into the parking area for Broughton Beach. You can continue on Marine Drive and take advantage of several pullout areas to view waterfowl on the Columbia River. You can read the Birding Trail guide for this location by going to the [Oregon Birding Trails Website](#). Choose the Willamette Valley Birding Trail. Click on the Trail Guide and choose the Portland Loop Guide. Section P-3. Broughton Beach has become a real hot spot. It can be productive at any time of year. It is especially good for shorebirds and is also good for owls, ducks, terns, and loons. New county birds for me at that site over the past five years are: Burrowing Owl (December 2016), Brown Pelican (November 2016), American Tree Sparrow (November 2014), Sanderling (September 2013) and Black Scoter (December 2011).

Forest Park Information
View A Google Map

Location, Habitat, and Birds: Forest Park has the distinction of being the largest forested city park in America. At right around 5000 acres, it dwarfs the other parks in Portland and, as expected, it provides some good birding opportunities. Skyline Boulevard borders the west side of the park and offers a good route for birding this area. From downtown Portland, take Burnside Street west into the hills above Portland for 3.4 miles. Turn right onto Skyline Blvd just after passing the Larry Keating Mansion. Zero your odometer at this point. Go 6.6 miles (just past Germantown Road) to NW Newton Road (gravel road on your right with an open green gate). Take Newton to a parking area and bird the trails here. Return to Skyline and drive another .5 miles to an unmarked road on the right (this road also has a green gate and a "BPA Road" sign on it). Walk the dirt road to the power lines and bird the power lines. Return to Skyline and go 2.7 miles to Skyline School on the right. Continue past the school on Skyline for 5.2 miles and look for an unmarked logging road. Park and walk around the blue gate into a clear-cut (good for Mt. Quail). There are several other clear-cuts beyond this one that offer good birding. Back on Skyline, go another 3 miles to Rocky Point Road. Turn right and go 0.4 miles to an unmarked logging road with a green gate on your left. Bird this road. From this location, you can continue on Rocky Pt. Rd. to Hwy 30, turn right, and it will take you to the Sauvie Island bridge where you can continue birding or return to Portland after a great day of birding Forest Park. Birds you may be able to see along the before mentioned route are Mt. Quail, Cooper's Hawk, Band-tailed Pigeon, Short-eared Owl, N. Pygmy-Owl, Barred Owl, Vaux's Swift, Calliope Hummingbird, Red-breasted Sapsucker, Pileated Woodpecker, Olive-sided Flycatcher, Hammond's Flycatcher, Pacific-slope Flycatcher, Cassin's Vireo, Hutton's Vireo, Warbling Vireo, Steller's Jay, Tree Swallow, 3 chickadee species, Bushtit, Brown Creeper, Red-breasted Nuthatch, Bewick's Wren,
Winter Wren, House Wren, both kinglets, 6 thrush species (including Western Bluebird), 8 species of warbler, 7 sparrow species, Red Crossbill, and Evening Grosbeak. Source: Catalyst Publications, Birding Portland and Multnomah County, John Fitchen.

**Location, Habitat, and Birds:** To find this location take McLoughlin Blvd. (99E) south out of downtown. 2.2 miles south of the Ross Island Bridge, turn left (east) on SE Bybee Blvd. Shortly, the road turns north and becomes 28th Street. Just north of Woodstock Blvd, you will see the parking area for the garden. This beautiful gem of a birding location is a favorite for locals. If you don't see a single bird, it will be worth the trip. Some birds that are possible here include White-fronted Goose, Cackling Goose, 20 species of duck, Pied-billed Grebe, Double-crested Cormorant, Green Heron, Black-crowned Night-heron, Osprey, Sharp-shinned & Cooper's Hawks, Merlin, Virginia Rail, shorebirds, 7 gull species, Caspian Tern, Band-tailed Pigeon, Barn Owl, Western Screech-Owl, Great Horned Owl, Common Nighthawk, Vaux's Swift, Anna's Hummingbird, Rufous Hummingbird, Belted Kingfisher, Lewis's Woodpecker, Red-breasted Sapsucker, Pileated Woodpecker, Western Wood-Pewee, Pacific-slope Flycatcher, Cassin's Vireo, Steller's Jay. swallows, chickadees, Bushtit, nuthatches, Brown Creeper, wrens, kinglets, 4 thrushes, American Pipit, Cedar Waxwing, 8 warbler species (including Hermit), 9 sparrows, blackbirds, and finches.

eBird Hotspot Checklist for Tryon Creek SNA  
Friends of Tryon Creek Website  

**Location, Habitat, and Birds:** This park is just north of Lake Oswego and west of Milwaukie. From Portland, take I-84 exit 297 and take Terwilliger Blvd east for 1.7 miles to a traffic circle (follow the signs to Lewis & Clark College). The second spoke of the traffic circle will keep you on Terwilliger Blvd. Go another .8 miles on Terwilliger to the entrance of the park (Caution County Listers: the southern edge of the park is in Clackamas County). Many daytime mountain species can be found here and this location should not be overlooked as a good daylight destination but Tryon is especially good for owls. Northern Saw-whet, Barred, Great Horned, and Pygmy-Owl have all been found here (Source: Catalyst Publications, Birding Portland and Multnomah County, John Fitchen.) A recent July day produced the following species: Cooper's Hawk, Hutton's Vireo, Pileated Woodpecker, Hairy Woodpecker, Northern Flicker, Warbling Vireo, Black-throated Gray Warbler (10+), Wilson's Warbler (10+), Pacific-slope Flycatcher (10+), Band-tailed Pigeon, Swainson’s Thrush, Brown Creeper, Winter Wren, and several more.
Check for regular guided bird walks at the [Friends of Tryon Creek Calendar Listings](#).

**geographic coordinates**  45°28'15.6"N 122°26'05.4"W  
(45.470986, -122.434828)

**Location, Habitat, and Birds:** From the middle of Gresham on E. Powell Blvd, turn south on Roberts Avenue (by Bank of America). Travel south on Roberts for 0.75 miles and turn right (SW) on Regner Road. Take Regner for about 1.4 miles to SW 37th Terrace. Turn right onto this street and drive a block and a half. Park your car near 327 SW Terrace. There is a path that goes between 327 SE Terrace and the neighboring residence. Take this path into the Darby Butte area. This is public land with access to everyone. It is also known as Darby Ridge or Gabbert Butte. You walk up the grass meadow with trees planted and you can find a trail 0.8 of the way up the meadow that cuts through the field and planted tree and heads to the west. When you reach the end of this trail you can take a trail to the east that goes to the top. There is also access from SE Gabbert Street off of SE Regner Road. SW Gabbert Street continues through the trees, but this is a dirt road. There are roads and trails through this area although it is very steep in some spots. Birds in the area include Great Horned Owl, Pileated Woodpecker, Red-breasted Sapsucker, Hairy Woodpecker, Downy Woodpecker, Band-tailed Pigeon, Chestnut-backed Chickadee, Brown Creeper, Bewick's Wren, Cedar Waxwing, Pine Siskin, and Lesser Goldfinch. (This information provided by John Gatchet)

**Location, Habitat, and Birds:** From Marine Drive, turn south on 185th Street. Go 0.2 miles and turn right on NE Riverside Parkway. Go a half mile to Airport Way and turn right. Go 0.4 miles and turn left on NE Mason Street. (To reach this location from I-84, take exit 13 and turn south on 181st Street. Go about 1.4 miles to Mason). Look for a dirt road immediately after turning onto Mason Street. Park and walk the dirt road until you come to a bluff that overlooks the marsh. If you're looking for marsh birds like American Bittern, Marsh Wren, Common Yellowthroat, or a possible Tricolored Blackbird (never seen here but you never know), this is a good spot. Virginia Rail and Sora can be heard calling in the spring and an occasional Northern Harrier can be found cruising the marsh. Swamp Sparrow is not to be expected but has been found here before.

[**eBird Hotspot Checklist for Blue Lake County Park**](http://www.ebird.org/ebird/hotspot/38064346)

**Location:** Off Marine Drive between NE 185th and NE 223rd.

**Habitat and Birds:** This lake sits just yards from the Columbia River and is right next to Fairview Lake. Loaﬁng gulls and waterfowl can be found in the water and along the shore. The trees along the lake provide sustenance for migrating song birds in spring and fall.

eBird Hotspot Checklist for Oxbow Regional Park

**Location, Habitat, and Birds:** This park charges a fee. Take I-84 exit 17 in Troutdale. Proceed east along the frontage road for a half mile and turn right (south) on NW 257th Ave (AKA NW Graham Road). Go 0.3 miles and turn left on the Historic Columbia River Hwy. Take the 2nd right onto Buxton Avenue and travel south for about a half mile and the road will fork. Stay to the left and the road becomes S. Troutdale Road. Take S. Troutdale about 2.6 miles south and turn left (east) on Division (actually these two roads merge so you don't actually make a turn). Take Division east for 1.5 miles and turn right (south) onto SE Oxbow Drive. Take this road about 2.2 miles to SE Hosner Road. Follow Hosner north into the park. This is a good wooded area with lots of local passerine breeders and plenty of action during the migrations. It's situated right on the Sandy River so many birds use this area as a migration route. This is the best place in the county for finding Ruffed Grouse. Early mornings in springtime are the best times to hear the drumming of the amorous males so get here early. eBird Hotspot Checklist for Larch Mountain
Location, Habitat, and Birds: Go to the Oregon Birding Trails Website. Choose the Cascades Birding Trail. Then choose the Mt. Hood Loop Guide. Section 2. This is a favorite spot for local birders. There is a locked gate that prevents visitors from entering until the road is passable (closed from November to May). Birds you might see here include Sooty Grouse, Townsend's Solitaire, MacGillivray's Warbler, and Gray Jay.

Ainsworth State Park  return to the top

eBird Hotspot Checklist for Ainsworth SP
Location, Habitat, and Birds: About 8 miles west of Cascade Locks, take I-84 exit 35. Take the old Columbia River Hwy back west for about a mile. Take this highway west for your return to I-84. This is one of the most scenic areas in the Columbia River Gorge. This area has not been birded heavily so please report your findings if you bird this area.
Bonneville Fish Hatchery

geographic coordinates 45°37'59.4"N 121°57'21.7"W (45.633153, -121.956031)

View A Google Map
eBird Hotspot Checklist for Bonneville SP

Location, Habitat, and Birds: Birds you might see at this location include ducks, gulls, Belted Kingfisher, Red-breasted Sapsucker, Downy Woodpecker, Steller's Jay, all 3 Chickadees, both kinglets, Swainson's Thrush, Varied Thrush, Spotted Towhee, and Dark-eyed Junco. A Black-throated Blue Warbler showed up here once and Red-naped Sapsuckers are occasionally seen.

Bonneville Dam

geographic coordinates 45°38'29.9"N 121°56'32.3"W (45.641640, -121.942309)

eBird Hotspot Checklist for Bonneville Dam and Visitor Center

Location, Habitat, and Birds: From Portland, drive east on I-84 for about 39 miles (39.3 miles from the Jct. of I-5 and I-84). Take exit 40 and check in at the security checkpoint area. Continue on to the visitors center. You can see the main spillway from here. June is the best time to view gulls from this location because the annual Shad run creates a bit of a feeding frenzy at this time. Keep an eye out for the occasional Peregrine falcon and bird the small island that holds the visitors center for migrant visitors that might be stopping over for a rest. eBird Hotspot Checklist for Eagle Creek Trail

Location, Habitat, and Birds: About 1.5 miles east of Bonneville Dam (see instructions above), Eagle Creek empties into the Columbia. Only a short portion of this creek is actually in the county but it can produce some good birding and nice birds. To access this area, take exit 41 from I-84 and stay to the left. Go under the freeway and park near the mouth of the creek (45.641110, -121.931634). You can scope the river from here for gulls, loons, grebes, and ducks. Then drive back along the creek to bird the creek itself. The county line is about 100 yards upstream from the footbridge. Dippers are often found here and Harlequin Ducks nest farther upstream on Eagle Creek so you can see them near the mouth on occasion. Important note: There is no westbound onramp from the Eagle Creek exit. In order to return to the Portland area or other western locations, you will have to take the eastbound onramp and travel a few miles to Cascade Locks to access the westbound lanes of I-84. Source: Catalyst Publications, Birding Portland and Multnomah County, John Fitchen.
